E. RATIONALE FOR FINAL STRATEGY DETERMINATION The Old Standard Industries site is a 16 acre, inactive battery recycling site in which a removal action was conducted. This site had been active from the 1930's to the 1970's and contained battery cases, lead/dross/sludge, fine dust, lead oxide, dried sludge, and high concentrations of lead in the soil. The Texas Water Commission (TWC) provided oversight of a removal which began on 04/04/84 and was completed on 03/05/85. During this time period, over 53,000 tons of contaminated soil from this site was taken to either the TECA hazardous waste landfill (Robstown) or the Browning-Ferris, Inc. landfill (San Antonio). Post-removal sampling by the TWC indicated that lead concentrations were reduced to less than 1000 ppm or 0.05 mg/l of leachate as indicated by the TWR Leachate Method. Since the threat to human health and the environment has been effectively removed, there is no need for further investigative actions.
